Scene Transition FX Pro: Free Edition Documentation

1. Importing the Asset

Import the **Scene Transitions FX Pro - Ultimate Edition** package into your Unity project. Once imported, you'll find the **TransitionManager** script, demo scenes, and essential assets included.

2. Setting Up Transition Manager

1. In your current scene (Scene A), create a new empty GameObject and name it **TransitionManager.**
2. Attach the **TransitionManager** script to this GameObject.

3. Selecting Transition Effects

1. In the Inspector, open the **TransitionManager** component.
2. Select your desired transition effect from the dropdown menu.
3. Customize the effect with available parameters (e.g., **Transition** Speed, **Direction**, **Effect Type**).
   Each transition offers unique settings to fit your vision.

4. Tag your panel

Set a new tag for your transitioning scene panel and name it **"TransitionPanel".**

5. For triggering the transition effect via UI button

1. Create an UI button in your scene
2. Assign the **PlayEffect** component (script) to the button.
3. Simply drag & drop the **TransitionManager** GameObject to the empty field .
4. Create the OnClick Event with the **PlayButton** GameObject and select the **"PlayEffect.OnButtonClick"** method.

Alternatively, you can call and trigger the "**transitionManager.PlayEffect**" from anywhere in your project.
